## WATER POINT COMPLETION REPORTS

### OUR PROMISE TO YOU

For every donation of \$12.5K, we will report back to you to show you the impact that your donation is making by providing a report of a specific water point that you have helped fund. This will include a photo with GPS coordinates, and the number of people who have benefited from your gift. We will typically be able to provide the report in 12 months.

### WHAT IS A WATER POINT?

Water systems are constructed from a water source. The source is pumped into a distribution network to reach the end users through individual water points. Each water system is either protected or treated to ensure it is safe for users to drink. The number of water-points created in a system depends on the yield of each water source, or how much water is flowing. High yield sources can have many distribution points, while low yield sources may only have two or three.

Our standard is to ensure that every community member has access to water within 30 minutes roundtrip of their home, including the waiting time at the water point. This means that the number of water points we have in a specific area will vary by population and geography. On average, we estimate about 200-300 people are served by each water point. Therefore, depending on the yield of the system, many thousands of people could be served by one complete system.

Reports are offered in **Kenya and Rwanda** for **100 water points** in each country.

## SAMPLE REPORT

### COMMUNITY, COUNTRY

Thank you, **John and Jane Doe**, for your partnership! Because of you, the **XYZ Community** in **Program Area ABC** are now accessing clean drinking water and the prospects of a healthier future. This **Type of System** is providing (**direct beneficiaries**) people with an accessible source of clean water.

Committees comprised of community members are trained to manage the water point, which ensures the availability of water for generations to come. Water continues to flow from World Vision water points because of our integrated community engagement model that focuses on community empowerment and sustainability.

World Vision is multiplying the health benefits of clean water by addressing sanitation and hygiene in **XYZ Community**. Activities include: helping people build and maintain latrines, promoting handwashing with soap, and establishing open defecation free communities. When combined, water, sanitation, and hygiene interventions can reduce child disease and death, support child protection and access to education, and reduce gender disparities.

Thank you for helping to improve health and save lives by providing clean water to families in **XYZ Community**. We're grateful for your partnership.

### YOUR IMPACT IN COMMUNITY

World Vision is a Christian humanitarian organization dedicated to working with children, families, and their communities worldwide to reach their full potential by tackling the causes of poverty and injustice.

**World Vision** is the largest non-governmental provider of clean water in the developing world, reaching one new person with clean water every 10 seconds.

From the country director to the person who runs the operations of the drilling crews, [World Vision staff] are highly educated, very experienced people. And that's what really makes the difference.
