EMERGENCY RELIEF IN EAST AFRICA

PROGRAM UPDATE

1.97 MILLION PEOPLE have been reached with food aid and humanitarian assistance in Ethiopia and Kenya during fiscal year 2019.

SITUATION UPDATE

Through your generous support, World Vision has been able to respond to the crisis in East Africa. We have provided food; water; sanitation, and hygiene (WASH); livelihood support; education; relief items; and interventions designed to protect the most vulnerable during times like this—the children.

The need to bring emergency aid to children and their families grows as they continue to face severe drought and extreme weather conditions.

This report highlights some of the lifesaving work you have supported in Ethiopia and Kenya—areas that have been severely affected by food shortages and hunger.

Since October 2019, World Vision's work in Ethiopia and Kenya has resulted in:

- **1,068,200 people** reached with food distributions
- **15,479 people** reached with nutrition assistance
- **18,995 people** reached with education

- **213,937 people** reached with water, sanitation, and hygiene interventions
- **9,556 people** reached with child protection activities
- **449,484 people** reached with shelter and other nonfood essentials
- **192,500 people** reached with food security and livelihood assistance
- **29,703 people** reached with health assistance

Thank you again for your support to bring aid to thousands of people across East Africa! You are helping to change lives of the most vulnerable along with their families. We appreciate your partnership and how through your generosity, the light of Christ is being shown to those who need it most.

“I want to thank World Vision on behalf of the government and my community ... [O]ur traditional management of resources is a pillar of our livelihood. We thank World Vision for focusing on critical resources that underlie the survival of our pastoral communities.”

—Chief Ilete, Turkana, Kenya

HUMANITARIAN DONORS

World Vision is able to reach more people because of our local and global partnerships within the public and private sectors.

ACCOMPLISHMENTS IN ETHIOPIA AND KENYA

ETHIOPIA

Because of flooding and drought that have impacted Ethiopia, internally displaced people have continued to increase over the past two years—with children and women affected the most from these crises. Ethnic conflicts and persistent violence also have led to the massive displacement of people. Through partners like you, World Vision has been able to bring the necessary aid to these families and help protect the most vulnerable.

Accomplishments over the past 18 months included:

- **1,053,630 people** reached with humanitarian assistance
- **3,608 people** reached with nutrition assistance
- **32,567 people** reached with food security and livelihood assistance
- **210,321 people** reached with water, sanitation, and hygiene interventions
- **5,434 people** reached with child protection activities
- **14,895 people** reached with education assistance
- **15,812 people** received shelter and nonfood essentials

In West Guji and Gedeo, seeds and farm equipment were distributed to help families restore households.

To increase access to sufficient and clean water, new construction was completed, including shallow wells, spring development, and a water point were completed.

Health workers and community volunteers were trained in good hygiene and sanitation practices, such as proper use of latrines, handwashing, and waste disposal. Construction of latrines and shower rooms also helped bring behavior change to communities.

Additional trainings were conducted to improve infant and young child feeding knowledge and practices.

Access to health services was increased due to disease outbreaks. Disease prevention measures, as well as coping

Nigussu Roba (above left), a father of five, receives emergency food assistance at a World Vision collection center. "The food assistance I received from World Vision has saved my children from starvation," he said.

mechanisms, were made available through temporary clinic programs.

Community-based, multipurpose friendly spaces were created especially for women and children to receive access to basic services.

World Vision created a cash and digital business unit in response to drought and conflict affected communities. The Cash and Voucher Program was implemented to help with recovery.

Planting new seeds of hope and happiness

Mesele Boru (left) is a farmer and father of seven children. At one time, his farm and all of his family's possessions were burned, leaving them with nothing. He and his family moved to a collection center at Bule Hora for three months. Being displaced from their home was challenging. Mesele and his family were able to return home with livestock and corn and vegetable seeds to plant. The seeds have grown and will be ready to harvest, which will cover an entire year of food cost for his family. "World Vision's seed support has changed my worries to happiness," he said.

KENYA

During the past fiscal year, Kenya suffered from one of its most severe droughts in 38 years. The drought worsened food shortages and increased water scarcity. The National Drought Management Authority recorded over 2,000 livestock deaths in Mandera County, which included 371 cattle, 893 sheep, 755 goats, and 68 camels. Despite what seem like setbacks, World Vision and our partners were able to serve children and their families with necessary aid, as well as other services.

Accomplishments over the past 18 months included:

- **917,045 people** reached with humanitarian assistance
- **271,000 people** reached with food assistance
- **1,798 people** reached with nutrition assistance
- **159,933 people** reached with food security and livelihood assistance
- **3,616 people** reached with water, sanitation, and hygiene interventions
- **4,122 people** reached with child protection activities
- **4,100 people** reached with education assistance
- **435,576 people** received shelter and nonfood essentials

In Ganze, 3,045 students from seven schools benefited from the school feeding program through the National Emergency Preparedness Response Fund.

In Turkana, the installation of a pipeline extension and a solar borehole and construction of two water kiosks benefited more than 1,500 community members.

Through the Kakuma Empowering Children as Peace Builders Project, 735 members were trained in using the peace road curriculum. A learning forum was conducted for 37 teachers who shared their achievements, challenges, and lessons learned.

Increased food availability at household level through monthly food rations distributed by World Vision under the Turkana Food Assistance program and other partners/stakeholders has reduced cases of child labor, early marriages, pregnancies, and sexual abuse among children. This has led to increased attendance in school and enrollment.

In collaboration with FilmAid International, a nonprofit that tells stories through film about refugee

Agnes (not her real name) is a mother of four from Turkana. She lost her livestock due to the drought and consequently was only able to purchase one meal a day for her family. Fortunately, Agnes was able to take part in the Turkana Food Assistance program implemented under the Sustainable Food Security Project in partnership with the World Food Program and the Turkana county government. The food she received has been enough for her children to have three meals a day.

families, information dissemination has enhanced quick sharing of critical messages such as the food basket, days of distribution, family allocation, and ration entitlements under refugee programming.

CVA training teaches the value of being a refugee

Elizabeth (in pink), 44, had been a refugee for 20 years before she learned about her rights as a refugee from World Vision. Today, she is the chairperson of the Kakuma 4 Refugee Camp Citizen Voice and Action (CVA) group. The CVA group has 25 members, trained by World Vision. The training taught Elizabeth to ensure service providers could improve services like health care, food security, and education, which impact the lives of children and their families in the refugee camp.

She learned about social accountability initiatives that can lead to the empowerment of the community, particularly the refugee community.

CLEAN WATER LEADS TO SAVINGS GROUPS AND FARMING IN TURKANA, KENYA

To increase access to clean water, water system construction began in the Lorus community, which is nearly 4,000 people. Four water points are complete and the water treatment system is scheduled to be installed by the end of FY20.

In FY19, 758 people benefited from a newly constructed sanitation facility. A total of 217 children have access to better hygiene after the installation of handwashing facilities in two schools. After learning how to use a latrine and about good hygiene practices, 200 children are now ambassadors in their schools and have shared what they have learned with their families.

Two communities in Nanaam and Teremukus have started to use shade nets for growing crops, which has led to diversifying their resources—benefiting 80 households.

A total of five groups were introduced to S4T (Savings 4 Transformation), reaching 70 households. As a result, return on savings stood at 53.8%, loans outstanding as a percentage of assets was at 69.8%, while 19.1% of members accounted for outstanding loans.

A total of 64 people (56 females and eight males) started individual kitchen gardens where they received training on different agronomic skills, including crop production, farm management, and climate smart technologies. Eighty beneficiaries received four shed net kits with micro-irrigation systems and vegetable seeds that have enabled them to grow high-value vegetable crops. The members have started harvesting vegetables for household consumption from their small water-harvesting pits.

During the reporting period, rangeland resources played a crucial role in supporting resilience across the project sites. Traditionally, community elders have made decisions about the management of different resources, including rangelands. Their decisions were previously based on grazing patterns and control migration. However, the Lorus community needed to change how land is used and divided. To help with this process, 176 community members received training about building on range and grazing management planning. As a result, community elders agreed to demarcate nearly 14,000 acres of land for wet and dry season grazing.

In addition, 46 participants—including 37 females and nine males—were trained on how to create maps that show natural resource management from the Modified Farmer Field School.

S4T brings hope to a mother, her family, and community

Ekai Aligoi (left), is a 26-year-old mother of four children. She does not have a formal education, which means she has little chance of finding employment. However, Ekai joined a S4T (Savings 4 Transformation) group that was supported by World Vision under the Turkana West integrated WASH Project.

Like most of her peers who are mothers and caregivers, there is hope for their community that is affected each year by long periods of drought, crop failure malnutrition, and perpetual loss of livelihood. The project supported her group with shed nets that came with a “one drop” irrigation system for water efficiency. She and her group used their savings to purchase vegetable seeds, including kale, spinach, and cowpeas. The vegetables from their individual plots provided the needed nutrition support for her livelihood.

“We are grateful for the training we have received as groups who depend much on small livestock,” she said.
